URINARY COLLECTION KIT

CONTENTS:

1 EA. CSR WRAP
1 EA. TRAY
1 EA. 100 ML COLLECTION BURETTE
1 EA. PVP SWABSTICKS, 3S
1 EA. LUBRICATING JELLY, 3GM
5 EA. GAUZE, 2 X 2 NON WOVEN
1 EA. TOWEL, PAPER/POLY/PAPER
1 EA. DRAPE, FENESTRATED

Instructions for Use on back.

LBL-UK-01 Rev 1
Effective: 08-2010
INSTRUCTIONS FOR USE:
The use of this product must be preceded by an established institutional protocol and performed by person trained in the procedure and knowledgeable of the inherent risks.

* Remove contents from the package

* Follow established institutional protocols for placement, use and maintenance

* Use appropriate precautions to prevent exposure to biological hazards while handling.

* Silicone catheters are fragile and must be handled with care. Forceps, clamps and sharp instruments can damage catheters. DO NOT suture the catheter.

* Apply a small amount of water soluble lubricant to the tip of the catheter. Insert catheter until urine flow is initiated and advance the catheter an additional 1 cm to insure that the second side hole of the catheter is in bladder. DO NOT insert the catheter too far. If uncertain of tip location, verify with radiography.

* Secure catheter with tape to prevent dislodging or migration. CAUTION: There is no balloon in this catheter to hold it in the bladder.

* Connect catheter to a urinary collection system.

* Remove catheter gently and slowly. Excessive force cause catheter to rupture.

LBL-UK-01 Rev 1
Effective: 08-2010

ATTACHMENT TO COLLECTION SET:
* Attach Luer lock connector to catheter

* Open pinch clamp

* A Velcro™ strip is located on the side of the Burette for attachment to the patient’s bed and must be attached below the level of the patient

* CAUTION: The collection burette must be kept upright at all times. If the air vent filter located at the top of the burette becomes wet, catheter will not drain.

* A needle less port is provided for specimen sampling and irrigation. To use close pinch clamp, swab injection site and attach syringe to activate valve.

* A valve is located at the bottom of the burette for drainage of the set.

CAUTION: DO NOT implant for more than 30 days. Federal (USA) law restricts this device to sale by or on the order of a physician. Ensure all connections are secure at all times. Dispose of properly.
